[GameChange Solar](#), a manufacturer of fixed-tilt and tracker solar racking systems, says it expects to produce approximately 300 MW of Genius Tracker single-axis tracker systems in the third quarter (Q3) for shipment to locations in the U.S. during the quarter. This is in addition to the 50 MW shipping now for Q3 installation. Total shipments for 2016 are expected to be over 400 MW.

“Customers are demanding competitively priced trackers, and we have met the challenge,” Andrew Worden, CEO of GameChange Solar. “Genius Tracker has proven performance and fast install speed, which has led to orders accelerating rapidly.”
