

GameChange Solar Amazing Drone Video of 102 MW Genius Tracker in South Carolina

06 Oct 2020

GameChange Solar announced the operational completion of a 102 MW Genius Tracker system located in South Carolina. The project spans over 600 acres and utilizes more than 300,000 Tier 1 – 72 cell modules. The system also features the preassembled SpeedClamp which significantly reduces module mounting time, especially on large utility-scale sites. The project was completed by **Oakwood Construction Services**, which is based in Texas.

Max Johnson, Director of Business Development at GameChange Solar, stated: "Hearing positive feedback on our preassembled parts from multiple experienced EPC's further proves GameChange Solar's Genius Tracker is the simplest single-axis tracker system to install on the market. Oakwood did an efficient job installing Genius Tracker™ ahead of the project schedule and GCS looks forward to continued opportunities to work together.

David Barraza, Senior Construction Manager at Oakwood Construction Services, stated: "The GameChange Genius Tracker is simple to install and user-friendly to construction crews."
