

GameChange Solar gets 50-MW tracker order in West Africa

April 6 (Renewables Now) - US-based solar racking manufacturer GameChange Solar has received a purchase order for a single-axis Genius Tracker totalling 50 MW, to be installed as part of a project in West Africa.

The contract calls for GameChange to make an immediate shipment. The company did not disclose the name of the customer and the project.

To date, GameChange has sold more than 6 GW of systems in the US and overseas. In December, the firm made a projection that sales of the Genius Tracker with 2 portrait (2P) configuration would exceed 3 GW worldwide over the next three years.
