

GameChange Solar making 1 GW of trackers for Texas projects

September 1 (Renewables Now) - US-based solar racking manufacturer GameChange Solar is producing more than 1 GW of Genius Tracker systems and shipping them to Texas under recent orders, it announced on Monday.

The company did not give details about the projects or its customers.

"We are excited to be producing over 1 GW of systems for shipment to Texas now and anticipate this to be a continued area of substantial growth," commented chief commercial officer Derick Botha.

The Texas solar market has been expanding fast over the past weeks. Some notable solar projects in the state that recently proceeded to construction include Recurrent Energy LLC's 144-MW Pflugerville solar park in Travis County and Longroad Energy Holdings LLC's 331-MW DC Prospero 2 solar project in Andrews County.
