

## GameChange Racking used in 32 MW North Carolina

by Chris Crowell

GameChange Racking recently completed delivery of a 32 MW project to North Carolina. The system supports over 100,000 panels, was produced in four weeks, and was delivered more than two weeks ahead of schedule. Piles were delivered first, many as much as three weeks early.

“GameChange Racking’s efficient operational execution helps to reduce delivery times to customers. This helps them meet tight project completion deadlines and prevent cost overruns on their projects,” said Derick Botha, VP of sales at GameChange Racking.
